Long Truong

Memphis, TN | Open to Relocation | US Citizen
longtruong31@gmail.com | github.com/LongTTruong | linkedin.com/in/longtruongmemphis

Technical Skills

Languages: Python, Kotlin, Java, C, JavaScript
Frameworks: FastAPI, Spring Boot, React, Next.js, SvelteKit
Tools/Infrastructure: Docker, Linux, Git, SQL, Vercel, AWS EC2, Amazon ElastiCache
ML/Computer Vision: YOLOv8, Agentic Harnesses,

Projects/Engineering Experience

MedBud - AI-Powered Medication Adherence Assistant https://github.com/LongTTruong/MedBud

- Built a full-stack SMS/WhatsApp medication adherence platform for older adults using **FastAPI**, **PostgreSQL**, **SvelteKit**, and **Twilio**, enabling low-bandwidth patient engagement without requiring a mobile app.
- Developed an agentic inbound messaging pipeline with local **Qwen2.5** 7B inference served via llama.cpp, performing structured intent classification, bilingual English/Spanish language detection, symptom triage, and safe keyword-based fallback.
- Designed and shipped multiple operational dashboards, including a staff dashboard, patient transcript view, caregiver dashboard, and refill management queue, supporting real-time adherence monitoring and intervention workflows.

Innovate Memphis Website Refactor
GiveCamp 2026

- Led redesign and architectural cleanup of a legacy WordPress site with excessive plugin dependencies.
- Simplified CMS architecture by migrating functionality into Divi-based components and custom **PHP/CSS**.
- Reduced backend complexity and improved maintainability by eliminating redundant WordPress plugins.
- Coordinated with a volunteer development team and non-technical stakeholders to deliver a redesigned site.

Personal Website https://longttruong.github.io

- Designed and deployed personal and professional website using **SvelteKit**, **TailwindCSS**, and **Melt UI**
- Implemented responsive UI and SEO-optimized structure for local search visibility.

Professional Experience

Electronics Technician
FedEx (Contract via Abacus) *Oct 2025 – July 2026*

- Diagnose and repair hardware and software issues on Zebra RS6000 and WT6000 enterprise devices.
- Configure Zebra WS501 Wearable Computers according to client specifications.
- Documented diagnostics, repair actions, and inventory/status changes in RMS, supporting accurate tracking and operational reporting.
- Support on-site supply chain analyst with device configuration and data management tasks.
- Wrote internal VBA script to simplify team members' configuration processes.

Undergraduate Research Assistant
SMART BME Lab – University of Tennessee - Knoxville *Nov 2023 – May 2024*

- Developed Android applications for SoftBank Pepper robots using the QiSDK, **Java**, and **Kotlin**.
- Reduced median API response times by ~3 seconds (40%) by redesigning speech recognition pipeline.
- Improved application performance through multithreading, increasing responsiveness of concurrent tasks.
- Managed Git workflows and maintained repository integrity for collaborative development.
- Mentored and onboarded new research assistants to organization codebase and code conventions.

Nurse Technician
University of Tennessee Medical Center - Knoxville *Aug 2021 – Jan 2022*

- Provided direct patient care for up to 30 patients per shift in a high-acuity hospital environment.
- Assisted clinical staff during emergency situations including code responses and patient stabilization.

Education

Western Governors University *November 2026 - April 2027*
B.S. - Computer Science

University of Tennessee - Knoxville *August 2019 - May 2024*
Coursework towards B.A. - Linguistics and B.S. Neuroscience

Hackathons & Community

HackDuke (2023), VTHacks 11 (2023), VandyHacks X (2024), HackMemphis (2025), MCP Hackathon (2026), GiveCamp Volunteer Developer (2026)
